Portfolio & case studies: **alexgrinberg-ios.web.app** | LinkedIn: linkedin.com/in/alex-grinberg-7089a214

PROFESSIONAL SUMMARY

iOS developer with 15+ years in software Quality groups, including 6+ years as an automation developer writing production code in Python and JavaScript. Independently designed, built, and shipped two full apps end to end, both live on the App Store: Dog Schedule, a social/marketplace app in Swift and UIKit with a Firebase backend; and Parking Share, a SwiftUI + Firebase app with hand-rolled security rules and a custom design system. Brings a quality engineer's eye for edge cases, testing, and release discipline to every feature shipped.

FEATURED PROJECTS

Dog Schedule (iOS App)

Independent project · Live on the App Store · Swift, UIKit, Firebase · ***View on the App Store***

- Designed and built a community dog-walking marketplace app end to end in Swift/UIKit — 82 source files organized around a service-layer architecture, with real-time data via Firebase Firestore.
- Implemented Firebase Authentication (email/password, Google, Apple, and phone/SMS sign-in), Cloud Storage for photo uploads, and Cloud Functions (Node.js) driving push notifications through Firebase Cloud Messaging.
- Built live walk tracking with MapKit and Core Location, in-app chat with photo/document attachments, Face ID app-lock, dog-sharing between accounts, and a full light/dark design system.
- Wrote hand-rolled Firestore and Storage security rules and an XCUITest UI-test suite; maintained a sustained, PR-based git history (375+ commits over a month of continuous iteration) with a documented release checklist, shipped through App Store review (v1.2.4 live).

Parking Share (iOS App)

Independent project · Live on the App Store · SwiftUI, Firebase · ***View on the App Store***

- Designed, built, and shipped a native SwiftUI + Firebase app for apartment residents to share assigned parking spots — two enforced roles (admin / resident) and a fully custom "Deck / Industrial Signage" design system, built from scratch (bundled fonts, custom components, no system UIKit styling).
- Implemented Firebase Authentication (phone OTP + email) and Firestore, with hand-rolled security rules enforcing every permission boundary independently of the UI — verified directly against the live Firestore REST API with a real end-user ID token rather than relying on simulator testing alone.
- Built an admin-facing garage builder (floors and stalls) and a resident-facing self-service flow — sharing toggle, recurring weekly schedule, one-off date windows, double-park / EV-charger flags — enforced identically on both the client and the backend rules.

Full case studies for both apps — flow diagrams, permission models, and design systems — at ***alexgrinberg-ios.web.app***

TECHNICAL SKILLS

Languages: Swift, Python, JavaScript / Node.js

iOS: SwiftUI, UIKit, Swift Concurrency (async/await), MVVM, MapKit / Core Location, Face ID, push notifications (APNs), localization (EN / HE, RTL), accessibility, Swift Package Manager, CocoaPods, TestFlight

Backend: Firebase (Auth, Firestore, Storage, Cloud Functions, Cloud Messaging, Security Rules), REST APIs (URLSession)

Testing & tools: XCUITest, Playwright, Cypress, Git/GitHub (PR-based workflow), Agile/Scrum

PROFESSIONAL EXPERIENCE

15+ years in the Quality group (QA and test automation leadership), 6+ of them as an automation developer writing production code.

QA Automation Team Lead, Cynomi (2025 – Present)
- Building a Playwright/Python automation framework from scratch — hands-on coding, code review, technical direction.

Head of QA, Crowded (2023 – 2025)
- Built the QA function from scratch; owned the Cypress/Python automation stack, from framework design to test code.

QA Team Leader, Fairtility (2022 – 2023)
- Established QA processes and test automation from scratch; led a team of 4.

QA Automation Tech Lead, Sisense (2018 – 2022)
- Owned automation frameworks and test environments for a BI platform as the hands-on technical lead for automation.

Additional experience: QA Team Lead, Avaya/Radvision (2011–2018) — QA Engineer, Check Point Software (2010–2011).

EDUCATION & LANGUAGES

B.A. in Biotechnology — Universidade Federal de Ouro Preto, Minas Gerais, Brazil.

Udemy: iOS Swift Language & Mobile App Development — Firebase, CocoaPods, Ruby Version Manager.

Languages: English (Native), Hebrew (Native), Portuguese (Fluent), Spanish (Conversational), French (Basic).
